

Hernon Equipment

for dispensing & UV curing

Our speciality in engineering adhesives and sealants has prompted us to develop a complete range of dispensing and UV curing equipment for precise and reliable application of adhesives.

Autobonder™ 2011

- Precise dispensing of adhesives or other materials with viscosities ranging from liquid to paste
- Suitable for medium to high volume dispensing
- Reservoir allows drop and use operation
- All contact components constructed of inert materials to handle the most aggressive chemicals

Autobonder™ 2001

- Precise dispensing of adhesives or other materials with viscosities ranging from liquid to paste
- Suitable for low volume production and repair operation
- Integrated vacuum control prevents dripping of low viscosity material
- Syringe reservoir can be hand held for flexible dispensing

Autobonder™ 2511

- Dual turntable dispensing equipment with integrated controller
- Consistent dispensing on circular or disc shaped parts such as magnet, spider and basket
- Optional expansion of up to four dispensing valves for (4) simultaneous operations on a single cycle

UV Wand System

- Spot curing of small parts and hard to reach places
- Digital bulb life hour-meter for accurate aging and performance indication
- Digital control for automated operation
